

C-HIP CERAMIC HYBRID EMQ BEARINGS

The C-HIP Ceramic Hybrid EMQ Bearings utilize ceramic balls that are made with Hot Isostatic Pressing (HIP). These ceramic balls have an even greater density and hardness than a standard ceramic ball. Ceramic hybrid bearings have steel races and ceramic balls. Ceramic balls are suitable for applications where high loads, high speeds and extreme temperatures are factors. Long life and the need for minimal lubrication make this material appropriate for extreme applications. We also offer these EMQ Bearings with High Temp. Seals capable of operation up to 230° C

ABOUT

Since 1987, one of our primary goals at the Boca Bearing Company has been to maintain the world's largest inventory of miniature bearings in all the most popular metric and inch sizes. We also have an extensive inventory of special sizes and styles, including ceramic hybrids, full ceramic bearings, one way clutch and three piece thrust bearings. Currently, Boca Bearing Company has over 8000 different sizes and over 10 million items in stock and ready to ship.

Whether your needs call for a few bearings, a few hundred or a few hundred thousand, you can always rely on us for unsurpassed service. The Boca Bearing Company takes pride in having extremely competitive prices, rapid response time, and on-time deliveries. We are always willing to go above and beyond the call of duty to provide radical customer service and keep our customers delighted.

Boca Bearing Company's Commitment :

To provide the right bearings for the right applications delivered at just the right time.
